

Minimal Economic Perspectives – Fanon and Retamar By Shomit Sirohi

- I. Fanon and Retamar on the Current Moment of Praxis and Organic Reflection which then is theoretical practice in Althusser and reflection in Sirohi – our map for the Algerian, Cuban and Indian Path merged into a successful team for cricket and Beyond the Boundary by CLR James

In fact there should be a cricket introduction to a strike – that then is the common mass working class participation in Indian economics – beyond the state and market unity which then has a mixed economic detailing process there is also the working class which listens to CLR James every day and develops race histories from Sirohi's rather black panther histories of American praxis also developing and this then becomes a race struggle history for cricket in turn again.

I call this an introduction to Sirohi's genius – a common mass translation of the praxis he calls mass general strike among people who are poor and even from underdeveloped backgrounds who have to listen to Althusser joking on how Sirohi is an organic intellectual in fact – he even speaks Haryanvi to communicate mass feminism and its dialectic of freedoms for sexual life.

All of this is what is called mass praxis – even Algeria understands the Universal axiom for black people and in fact Sirohi leads this type of spontaneous movement among the poorest black people and forces them into universities where the black lady speaks in lyricism about slave pasts – they are as poor and from as poor an language and education also learning the “new style.”

- II. Now the Future – all of which is a small healthcare invention called psychoanalysis and healthcare, in Hotel Chevelier Sirohi slept in for Torah reasons yesterday – this is for Israel

In fact there is doctoral and psychoanalytic determinism and the future is a long story told in the Illiad by Homer and even the long poems of Virgil which are documented by Communists and philosophers, all of us – which then is formats after formats of Encyclopaedias Sirohi recommends, and library sciences called biblioteca and all that forms in Cuba and Algeria soon – all of this then is his invention of cultural life soon – with functionalist sex stories on Amazon with objective computer scientist Richard Stallman to finally unite us on a free software and capitalist unity called Deterior.

We are on the same page at all times – Paul is finally aware of why he went to what Sirohi calls Damascus – and even Lystra unfolds in Algeria with its hills to be planned –

The process is cultural life and intellectual life with mass spontaneity, with French and Spanish life and Sirohi's white women and Indian friends all geared up for Algeria.

We thank you for the whole process of reflecting – we call this black style reportage – it is just the news on AI more than history and all that exploitation in our minds – we are just in the run of proving in fact that this is actually news –

Proof –

I. A divine, irrelevant philosopher.
